Tom van Deventer

65 years old

Stilfontein, South Africa.

I underwent a knee replacement. The wound became septic and had puss oozing out of the wound on a permanent basis. Doctors tried everything possible to stop the infection. I also visited a wound clinic on a regular basis, but it didn't help. After close to 2 years of battling the infection I reached the stage where my doctor suggested amputating the leg to prevent the sepsis from spreading any further. I started using Zoilevium Topical which I started squirting into the septic wound. After 8 days the sepsis was gone. I am so grateful for this product saving my leg.

Before:

After 8 days:

I was diagnosed with throat cancer and had to be incubated with an endotracheal tube. The wound around the tube got infected to such an extent that large amounts of puss was oozing out of the wound daily. Nothing that was done by the doctors or myself could stop the puss. I started using Zoilevium and found immediate relief. After 2 days there was no sign of any puss on the outside of the wound. A product I would HIGHLY recommend.

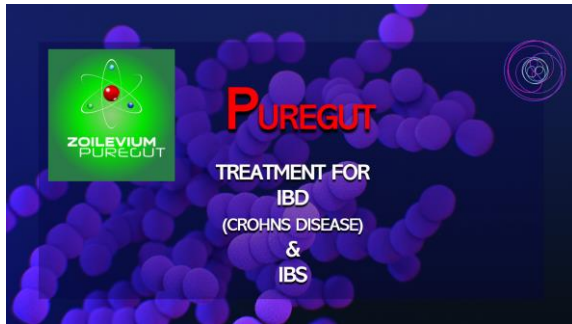

Pus coming out of wound

Pus drenched clothes

Hester Smit

62 years old

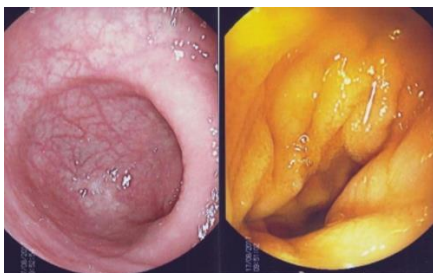

Vaal Park, South Africa.

I was diagnosed with severe Crohn's disease in 2014. I suffered from severe symptoms which included diarrhoea, cramps, nausea, weight loss and always feeling tired and without energy. Medication I used didn't help much or even at all to ease the severe symptoms I was experiencing. I started using Zoilevium PureGut in 2019. I started feeling relief after about 2 months of use. I was in full remission after about 6 to 8 months. Since then I have been able to lead a normal life with no dietary restrictions. I have been using PureGut on a permanent basis (as a preventative measure) and have had no relapses since 2019 until current date (September 2023). I would strongly recommend this product to IBD and IBS sufferers.

Before:

After:

Bowel preparation	Quality: clear liquids: excellent exclusion value.
Level reached	Caecum. Terminal ileum.
Colon	Normal.
Anus	Normal.
Terminal ileum	Normal TERMINAL ILEUM.
Specimens	1. RANDOM COLON BIOPSIES - no indication of IBD disease (full remission). 2. STOOL FOR CALPROTECTIN = 18 (normal)
Diagnosis	CROHNS COLITIS in full REMISSION.

Cecilia Horn

44 years old

Utrecht, South Africa.

I was diagnosed with severe Crohn's disease in 2016. I suffered from very bad symptoms which included diarrhoea, bloody stools, cramps, nausea, weight loss and anemia. I started using Zoilevium PureGut in 2023. I started feeling better after about 2 months, which included a weight gain of 4kg. By this time my symptoms were already significantly reduced. I have now been using Zoilevium for 4 months and intend using it as a general precautionary supplement on a permanent basis. (current date: September 2023)

Vaalpark, South Africa.

I was diagnosed with severe Crohn's disease in 2008. My symptoms were so severe and disruptive that I was effectively confined to my home for many years. I heard of the Zoilevium product from a neighbour

I suffered from constant bloating and discomfort. Nothing I used helped to relieve the symptoms. I started using the Zoilevium PureGut drops and experienced relief within a few days. The drops worked like a dream come true. Since using the drops, I have never felt bloated again. I use the drops on a continuous basis and really enjoy not being uncomfortable the whole time.

Linda Dugmore

75 years old

Pretoria, South Africa.

I am an elderly lady of 75 who was feeling 120 years old. I suffered from digestive problems, chronic pain in my hands and wrists from arthritis, as well as overall aches and pains due to fibromyalgia. I was permanently tired, to the extent that most days I could hardly get out of bed.

I was told about the potential positive effects of the Zoilevium Immune Support product from a nephew in Portugal. He in turn had seen excellent health results in a friend who had been battling with digestive problems. I ordered the product, and I have had amazing results with all my problems. My chronic pain has very significantly reduced. My energy levels have also significantly increased. To the extent that I have started working around the house and in my garden again.

I now regard the product as part of my daily, necessary, routine. Thank you Zoilevium!

Sarah Motsemmi

42 years old

Potchefstroom, South Africa.

I used to suffer from chronic headaches. I was on permanent pain medication. This overuse of medication started to cause kidney problems and kidney pain. My employer was used to me asking for pain medication in addition to the self-medication I was on. A client of ours introduced me to Zoilevium Immune Support and out of pure desperation I decided to try the product.

I started to experience results after about 3 weeks of use. I am now totally headache free. This has had the knock-on effect of stopping my kidney pain and problems as I no longer use pain medicine. I use Zoilevium Immune Support on a permanent basis now and have put my family on the product as well.

Thank you so much to Zoilevium.

To whom it may concern.

I would like to use this opportunity to discuss the results of my treatment of different patients with different medical conditions, who I consulted with and treated using the mineral infused Stoigela Mineral Drops.

My observations were made based on my experience as an alternative health practitioner, fully registered at the African National Healers Association. My practice only focuses on natural healing and noninvasive testing. A NLS Quantum Physics machine is used to test and diagnose patients, whereafter treatments are advised using natural products.

The following Case studies I discuss are of patients who were all examined by myself and whose progress was monitored and documented by myself as well.

I trust the reader will find the following information of interest. Any enquiries that may arise are welcome to be addressed to the writer.

Regards

Dr M.J. Brits

Case study 1

A 63-year-old male patient, approximately 1.6m in height and weighing approximately 100kg.

A high level of cholesterol was detected with my analysis. Severe water retention was visible in his lower legs and shin area, the severity was quite strong, with water filtering through the patient's skin.

I immediately started with the Stoigela mineral essence drops 42V2 (SMD42V2). The dosage used from day 1, was 20 drops of SMD42V2 per 500ml of water administered on a daily basis for the next 8 days. After which the dosage was reduced to only 5 drops of STMD42V2 in 100ml of water daily. The reason we decreased the water as per original dosage usage was because the patient had severe water retention. Within 14 days, the severe water retention subsided, the skin started to show dryness. As from day 20, dry skin started to exfoliate into little flakes. His skin also started to change color from dark blue, almost black color to a much lighter more natural skin color. Swelling also subsided drastically around his ankles. The patient's veins in his feet also started to become more visible as per natural state of skin. Cholesterol levels reduced almost back to normal.

Case study 2

A 92-year-old male patient, 1.8m in height, weighing approximately 110kg.

From the medical analysis I did for the patient, his bladder function was not normal. He also had bedsores, because the patient is in frail care where he is permanently in bed. He suffered from water retention. He did not urinate frequently. I started with his dosage of SMD42v2. I prescribed a dosage of 15 drops of SMD42v2 per 500ml of water daily. Within 2 days his urination was almost back to normal. Also the color of the urine was not as yellow as before.

I made a mixture of 50-drops of SMD42v2 in 500ml of water, decanted into a spray bottle. I instructed the nurse to apply 3 times a day on the bedsores. Within 3 days a remarkable improvement in the bedsores was noted.

Case study 3

A 26-year-old male patient, approximately 1.7m in height and weighing 75kg. On my examination of the patient and through relevant tests, it was confirmed that he had Swine Flu (H1N1 virus). He suffered from severe fever and heavy symptoms of flu.

For three days in a row he used 20 drops of SMD 42v2 per 100ml of water. By the second day his fever and most symptoms had subsided. By day three his health was almost back to normal again. No other medication was used within these three days.

Case study 4

A 12-year-old female, approximately 1.2m in height and weighing approximately 45kg. Upon the medical analysis, it was confirmed she had Bilharzia. Previously she had been on a treatment plan for almost

DHS Multi Services PTY 2016/444029/07 t/a Randfontein Health And Wellness center T/Dr MJ Brits 00011694/001
--

4 years, with very little success. I gave a dosage of 10 drops of SMD42v2 per 500ml of water taken daily. After 3 weeks of treatment, I reduced the dosage to 5 drops of SMD42v2 per 500ml of water taken daily. The patient's state of health improved significantly.

The mother of the patient confirmed that most of the symptoms have subsided, and that she is almost back to normal health.

Case study 5

A 46-year-old female patient, approximately 1.75m in height and weighing approximately 105kg.

The patient had a hernia repair with a vertical cut over the abdomen. The hospital staff did not take good care of the wound which caused in-hospital sepsis. I mixed 70 drops of SMD42v2 in 500ml of water, decanted in a spray container. The wound was cleaned three times per day with the mixture, on day two visible changes were already noted in the state of the wound. The process continued until the removal of the stitches, after which I instructed that the process be continued until the sepsis had been resolved. The efforts of the hospital staff to clean and heal the wound of the sepsis was to no avail. The wound only healed completely and was sepsis free once the application of the SMD42v2 mixture applied 3 times per day was initiated and adhered to.

Case study 6

A 1-year-old male patient, weighing approximately 9.5kg. The mother brought the baby to me for observation and medical examination. The baby had severe symptoms of flu accompanied by fever. The best diagnosis after running tests was that the baby had flu.

I gave a dosage of 5 drops of SMD42v2 per 100ml of water, which the mother had to split in 3 dosages over the duration of the day, she had to give the dosage for three days.

After the third day the baby's health was back to normal again.

Case study 7

A 7-year-old male patient, 1.2m in height and approximately weighing 30kg. After the medical examination, I confirmed severe eczema on his scalp. The eczema got out of hand and started to make a badly infected skin sore on the scalp. I instructed the mother to wash the hair daily with baby shampoo, after which she needed to use a lice comb to scrape the skin clean from the loose infected sores. After the sores were cleaned, she had to put a diluted formula of SMD42v2 on the open sores. The dosage for the mixture was 40 drops of SMD42v2 diluted in 100ml of water. It was applied 3 times per day. After two weeks of the continuation of the cleaning process, the skin eczema subsided. Another week later the skin sores and eczema completely subsided.

Conclusion

After observing the remarkable results of the product being discussed, I am very impressed by the versatility of the mineral compound. Obviously, the reliability in repetitive cases of the same ailments still needs to be demonstrated. However, until the contrary is observed, I am of the opinion that SMD42v2 is the best natural product I have used in my practice for alternative medicine to date. I would recommend this product any day for assistance with ailments of various kinds and for general wellbeing.
